

PlantEngineer.

Intuitive P&ID software based on Microsoft Visio®

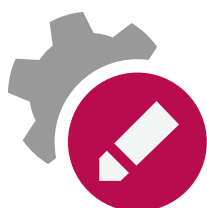

Your P&ID is the central document of the process plant

-  **Easy to learn & intuitive to use**
Thanks to the Microsoft Office user interface, you can create object-oriented P&IDs to industry standards without CAD knowledge and with minimal training.
-  **P&ID as an information hub**
Maintain an overview even in complex projects. Use the P&ID as a life cycle document for your system and receive consistent and needs-based information for all project members.
-  **Automatic “out of the box” reports**
Generate component lists, datasheets, pipe lists, ICA lists, and as-built documentation with a single click in Excel and Word or customize them according to your own company standards.

PlantEngineer 2025.

More efficient, with new functions & new design

The new features

Property Editor

Define your own shape properties using the Property Editor. Define the name, type and visibility and simply assign the property to the corresponding shape using drag & drop.

Function list

The function list contains all the functions on the drawing. Sort, filter and group the list according to your requirements. You can extend the list with properties as required. The feature is completed by importing and exporting from Microsoft Excel.

Quick Shapes

The new Quick Shapes function allows you to find important shapes quickly. You can simply drag & drop or right-click shapes that you work with frequently into the Quick Shapes. This makes it easier for you to find your most important shapes and allows you to work even more smoothly.
